<b>Pull request:</b>		

### Description

Execution reports are too dense and (in my opinion) can be synthesized.

Say, I configure a puppet module that changes the message of the day. I'd love to have a report that just says that this programmed change was successfully applied on node xyz.

Something like a list of all associated modules to the node xyz and thier current state.

Modules	State	Since
motd	Ok	dd/mm/YYYY hh:mm:ss
ntpd	Pending	dd/mm/YYYY hh:mm:ss
apache	Failed	dd/mm/YYYY hh:mm:ss

This list could be added in this screen. As a new status tab.
