

Foreman - Feature #12710

Revert value to the inherited one when the user presses the "inherit" button

12/06/2015 09:19 AM - Shimon Shtein

Status: New	
Priority: Normal	
Assignee:	
Category: Host creation	
Target version:	
Difficulty:	Fixed in Releases:
Triaged:	Found in Releases:
Bugzilla link:	Red Hat JIRA:
Pull request:	
Description	
Steps:	
<ol style="list-style-type: none">1. create a hostgroup with environment "env1"2. go to new /hosts/new3. select the hostgroup from [1]4. the value in the environment field would be set to "env1"5. press the inherit button to enable editing of the field6. select other environment ("env2")7. press the inherit button again	
Expected: the value comes back to "env1"	
Actual: the value remains "env2"
