Description Hi Guys, i tried to install foreman on a debian 7.9 VM and i get this error and i don't know how to fix it can you please help me. I Didn't changed anything on the configuration. foreman-installer Parameter foreman-proxy-dhcp-omapi-port invalid	

History

#1 - 12/09/2015 09:11 AM - Dominic Cleal

- Project changed from Docker to Installer
- Status changed from New to Feedback
- Difficulty deleted (easy)

Is this an upgrade?

If so, try adding this to /etc/foreman/foreman-installer-answers.yaml in the foreman_proxy section:

```
dhcp_omapi_port: 7911
```

Perhaps you can attach the answers file, minus passwords and OAuth tokens/secrets. Any information about versions you're upgrading to/from would be useful too.

I'd also generally not recommend using the installer on upgrade.

I didn't complete a full installation also start it full may i have to remove it and do a fresh installation?
I use the foreman-installer to start it.
