Pull request:	
Description Cloned from https://bugzilla.redhat.com/show_bug.cgi?id=1291775 Description of problem: I believe we should be able to choose puppet class while creating a Smart Variable. As of now we can do that after editing variable. Version-Release number of selected component (if applicable): How reproducible: Always Scenario 1: Steps to Reproduce: From Config -> Classes -> Class -> Smart Variables, create a new Smart Variable. Actual results: The smart variable is created in the same class from where we created it. Scenario 2: Steps: -> Edit the above created variable. And Change the Puppet Class it belongs to. Actual Result: This changes the puppet class of that smart variable. Expected results: we should be able to choose puppet class while 'creating' Smart Variable. Additional info:

- Description updated

- Category set to Parameters

#2 - 12/13/2016 06:37 AM - Ori Rabin

- Status changed from New to Rejected

After discussion it was decided to open: <http://projects.theforeman.org/issues/16440> instead and allow to create a smart variable from the smart variables index page to avoid the confusion of choosing a puppet class while in the context of a different puppet class.
