Description

Hello,

I configured a Windows Server to send facts/reports to Foreman.
The name of the node is WIN2012.
When I execute a chef-client, it creates two hosts (WIN2012 and win2012).
The downcase host contains the reports and the uppecase contains the facts.
Could you check it please?

Thanks.

Best regards

- translation missing: en.field_release set to 92

This is fixed in Foreman 1.11 but it would take too long before it gets released so we can fix this on chef-handler-foreman side as well. There was already a patch by Ginja (https://github.com/theforeman/chef-handler-foreman/pull/22). I added the same logic to old reporting as well.
