Description

currently, my application.js is 3.9 MB

Please use this tracker to break down components, i would like to understand which components are too large and maybe not required, or can be removed with some effort(for example jquery-ui).

History

#1 - 12/30/2015 10:54 AM - Tomer Brisker

a large part of this is because of gettext_i18n_rails_js, which includes all the app/assets/javascripts/locale/* directory in application.js - a total of about 2.5M currently.
