

## Foreman - Bug #12954

### Foreman puppet report status does not work without a puppet proxy

12/29/2015 10:26 AM - Chuck Schweizer

<b>Pull request:</b> <a href="https://github.com/foreman/foreman/pull/3028">https://github.com/foreman/foreman/pull/3028</a>	
<b>Description</b>	
As of foreman 1.10.0 the host_status table is not updated with puppet report status if your puppet masters are not official puppet proxy servers.	
<a href="https://github.com/foreman/foreman/blob/1.10-stable/app/models/host_status/configuration_status.rb#L81">https://github.com/foreman/foreman/blob/1.10-stable/app/models/host_status/configuration_status.rb#L81</a>	
This breaks configurations that use foreman as a report backend but do not make use of the foreman proxy code.

#### Associated revisions

##### Revision 8660f934 - 01/11/2016 06:44 AM - Dominic Cleal

fixes #12954 - config status is relevant if reports exist or via setting

For a host that has config management reports, but no Puppet proxy set, consider the config status relevant. This helps in an environment with reports but no proxy, but has the side effect of considering the status still relevant even if a host has a proxy unset and old reports.

Also add a setting to restore 1.9 behaviour of always showing config status, so users with no smart proxies will see the "No reports" status for those hosts without reports. All hosts without reports will show a warning state when the setting is enabled.

Test changes prevent setting changes leaking out of unit tests.

[#13112](#) is a regression, moving to 1.11 until resolved - and it may require an internal API change to fix. Will move it back if it turns out not to.
