Description

i had install foreman at eg <https://0.0.0.0> here and after login the foreman if i hit the https://0.0.0.0/api/compute_resources in browser it return json data but if i hit same url in my curl or ajax then it logout the whole system and return the error unable to authenticate user.

How can i authenticate with ajax api .

Thanks

Please don't keep opening issues, you already did at [#13002](#). As I said there, this also isn't a good method to get help.

The API supports HTTP basic authentication as shown at <http://theforeman.org/manuals/1.10/index.html#5.1API>.

Hello Dominic

i am using https://foremanUrl/api/compute_resources api to generate compute_resources in php,.Can you tell me how can i do this in PHP (any code example)

Thanks for help me.

As Dominic already stated, please do not use the bug tracker for this kind of requests, the more proper ways would be via the mailing list or irc.
