

Foreman - Bug #13035

Host fact search using ~ operator doesn't automatically add wildcards

01/07/2016 05:18 AM - Dominic Cleal

Status: Duplicate	
Priority: Normal	
Assignee: Dominic Cleal	
Category: Search	
Target version:	
Difficulty:	Fixed in Releases:
Triaged:	Found in Releases: 1.10.0

Pull request:	
Description	
When searching for hosts by facts with the ~/LIKE operator, entering a simple keyword without wildcards would have added % to the start and end of the value to match it anywhere (e.g. facts.foo ~ bar). Documented under wildcards at http://theforeman.org/manuals/1.10/index.html#4.1.5Searching .	
Since #11150 , the wildcards have to be added manually, e.g. facts.foo ~ %bar%, which shouldn't be necessary.

Actually, this is described at the start of [#12959](#). I didn't spot that when reading it. I'll fix it under that ticket.
