Description

1. git rev-parse HEAD
   567c726cacbb321724130720995e0b33eda0a39b

When adding a new host, oddly the BMC MAC field is pre-populated with the logged in user's email address. If you don't notice this and click submit, you get a vague error about 0x:<email address> not being an integer. ;)
