Description	
Unable to save DHCP Settings for puppetdemo1.demo.corp task failed with the following error: 400 Bad Request	
I am unable to remove the host or change the IP because foreman cannot remove the reservation from the dhcp server.

what is in the proxy log?
can you try with the latest proxy / foreman code and see if you can reproduce this?

I actually worked around the issue yesterday. Here is the problem.

1. If the proxy for the dhcp server cannot be reached or is not working it throws that error.
2. If I remove the dhcp proxy server from the subnet that the host belongs to I can then delete the node.

There must be some dependency between the dhcp proxy and the host that is keeping the user from deleting the host.

While the error message could be improved (maybe it was in the meanwhile), the behaviour feels correct
