Pull request:	https://github.com/theforeman/foreman/p ull/3182	
Description		

Description

The config/initializers/0_maintain_test_schema.rb initializer added in #7230 can potentially be removed with some further fixes.

It exists to initialise the test database before the main Rails app and models are initialised, fixing a couple of bugs where loading the model requires the table to already be available. If the table isn't available then validators etc. aren't set up correctly and tests may fail. Removing the initialiser and the test DB, then running rake test shows the issue. More info in <u>#12873</u>.

#13039 fixed one issue, but I think two further fixes are required:

1) validates_lengths_from_database needs to avoid reading DB information to set up its validators. <u>https://github.com/rubiety/validates_lengths_from_database/pull/12</u> fixes this.

2) Our own validate_inclusion_in_families validator should not check for the attribute's existence - this check can probably be removed.

Revision f20c2a1a - 02/15/2016 07:22 AM - Dominic Cleal

fixes #13409 - remove early initialisation of test DB

All models etc. referenced within the Rails environment startup, including in initialisers should load without making any reference to the database. This ensures when running `rake test` without a test DB set up already that the Rails env can be loaded first by Rails before it prepares the test DB from db/schema.rb (itself created by a db:migrate in dev/prod envs).

The table_name for Ptable needed to be overridden, matching ProvisioningTemplate as it defaulted to 'ptables' rather than 'templates' when the `attribute_names` call was removed from validate_inclusion_in_families.

References to attribute_names in API controller wrapping overrides were replaced by reusing the protected_attribute lists, which don't use the database and are also more consistent than the existing lists.
