Pull request: https://github.com/theforeman/foreman/pull/3147	
Description	
foreman-debug script returns non-zero return code even if it completes successfully, which makes hard to automate/script since the return code is not reliable.	
<pre>[root@foreman-rhel7 ~]# foreman-debug -d ~/1-foreman-debugExporting tasks, this may take a few minutes.</pre>

I can't update the version on the issue, but I have foreman-debug-1.7.2.50-1.el7sat.noarch installed here. Also the foreman-debug output points out FOREMAN: 1.7.2.

#3 - 01/28/2016 11:17 AM - Dominic Cleal

Please file a bug with Red Hat or contact them for support, as Foreman upstream appears to be working fine.

Reproducer:

```
echo "UPLOAD_DISABLED=1" > /usr/share/foreman/config/foreman-debug.conf
foreman-debug
echo $?
1
```

Easy help, thanks for report. Have you already created a BZ? Can you send me a link please?
