<b>Pull request:</b> <a href="https://github.com/foreman/foreman/pull/3156">https://github.com/foreman/foreman/pull/3156</a>	
<b>Description</b>	
<p>Rubocop can enforce what timezone to store in the database via Rubocop, so we can ensure everything is stored using UTC and we don't miss these things in code reviews. When objects are displayed, they must use the time provided by <code>set_timezone</code> in the controller.</p> <p>This is particularly relevant for Trends, Puppet graphs, etc... to ensure they are stored always properly.</p>

Fixes #13557 - Rubocop enforce specifying a timezone

Rubocop can enforce what timezone to store in the database , so we can ensure everything is stored using UTC and we don't miss these things in code reviews. When objects are displayed, they must use the time provided by `set_timezone` in the controller.

This is particularly relevant for Trends, Puppet graphs, etc... to ensure they are stored always properly
