Foreman - Bug #1356

Data Leak in Reports and Hosts pages

11/24/2011 11:36 AM - Greg Sutcliffe

Pull request:			

Description

A User with a Filter can see reports for other hosts.

Steps to reproduce:
1) Create a User with a Hostgroup "must be" "groupname" filter
2) Go to the Hosts page - this page is filtered correctly
3) Go to the Reports page - this page is **not** filtered by Hostgroup
4) Click a report for a host which is **not** in the User's filter - the User can see this data
5) Click Host details - the User can see this page too
6) Click Edit - the User can even start **editing** the page

Fortunately Foreman will raise an error if the User tries to save the Host, but I'm pretty sure he shouldn't be able to get this far.

Expected behaviour:

1) Reports should have the same filtering as Hosts
2) Hosts page should not be displayed if you go direct to http://$foreman/hosts/f.q.d.n (or any subpage like /edit)
