

Foreman - Support #13570

host.hostgroup search does not allow to search parent hostgroups

02/04/2016 03:00 PM - Jeff Sparrow

Status: Resolved	
Priority: Normal	
Assignee:	
Category: Search	
Target version:	
Triaged:	Found in Releases: 1.6.3
Fixed in Releases:	
Description	
If you have some host groups like: /hostgroup/foobar/apple/banna If you have hosts in any of the parents, you can not filter for facts. eg; you can not use: host.hostgroup ~ apple host.hostgroup ~ foobar host.hostgroup ~ hostgroup it will only allow calls to host.hostgroup ~ banana This means if you have shared hostgroups where multiple teams might share, they can not filter for facts. eg; /Corporate/IT/NetworkTeam/ host1 host2 /Corporate/IT/NetworkTeam/foobar host3 host4 because foobar now exists, searches into /Corporate/IT/NetworkTeam will fail. The fact searching should be done the same as host searching with: hostgroup_fullname ~
