

Katello - Feature #13582

ensure that Docker 'latest' tags work correctly in Katello

02/05/2016 11:02 AM - Chris Duryee

Status: New	
Priority: Normal

Pull request:	
Description	
<p>It's a common practice to have a tag that points to the latest version of a docker image. For example, you may have "fedora" that points to the latest Fedora.</p> <p>We need to test to confirm this works as expected in Katello. The test would be as follows:</p> <ul style="list-style-type: none">• create a local docker registry, upload a version of busybox (slightly older version is better but not strictly needed), tag it as "latest-busybox"• sync registry into Katello and deploy latest-busybox via foreman-docker plugin• upload a different (ideally, newer) version of busybox to local registry, tag as "latest-busybox"• sync registry into Katello, verify 'latest-busybox' is correct in all places• deploy again with foreman-docker, verify you get the version you expect <p>This may already work out of the box but might not. This ticket is to test this scenario and perform any needed fixes.</p>
