

Foreman - Bug #13617

If the "Usergroup sync" is enabled under LDAP authentication, login to Satellite server hangs

02/09/2016 09:09 AM - Brad Buckingham

Status: Rejected	
Priority: Normal	
Assignee: Daniel Lobato Garcia	
Category:	
Target version:	
Difficulty:	Fixed in Releases:
Triaged:	Found in Releases:
Bugzilla link: 1285075	Red Hat JIRA:
Pull request:	
Description	
Cloned from https://bugzilla.redhat.com/show_bug.cgi?id=1285075	
Description of problem:	
If the Usergroup sync" is enabled while configuring the the "Active Directory" as LDAP Server, the login to Satellite hangs.	
Version-Release number of selected component (if applicable):	
Satellite 6.1.4	
How reproducible:	
100 % reproducible.	
Steps to Reproduce:	
Configure Active Directory as LDAP Server as described in	
https://access.redhat.com/documentation/en-US/Red_Hat_Satellite/6.1/html/User_Guide/chap-Red_Hat_Satellite-User_Guide-Configuring_External_Authentication.html#sect-Red_Hat_Satellite-User_Guide-Using_Configuring_TLS_for_Secure-LDAP and https://access.redhat.com/solutions/1498773	
Actual results:	
Login to Satellite hangs indefinitely.	
Expected results:	
Should be able to login without any issues.	
Additional info:	
This same issue is addressed in the following upstream bugzilla and have fix.	
http://projects.theforeman.org/issues/10340	
Another similar bz#1284832
