Description	
I have installed foreman on a VM with Debian OS. When i start the website foreman is running and i can use it but just for five minutes or so the site wont react and when i reload the page i get a connection error from my browser. Can somebody pls help me.

- Status changed from New to Rejected

For support, please use the foreman-users mailing list or #theforeman IRC channel first and foremost. There isn't enough precise information here for a bug report. More information about using these is at <http://theforeman.org/support.html>.

I'd suggest trying other browsers, checking that it reacts with curl/wget and if not, then check the status of Apache and Passenger via passenger-status.
