Just so that others can find this stuff (as it took me a bit of time to figure things out): when you try smart-proxy from source with Puppet 4 aio packages installed you'll get the following:

```
[root@master smart-proxy]# yum list installed | grep puppet
puppet-agent.x86_64          1.4.2-1.el7           @puppetlabs-pcl
puppetdb.noarch             4.0.2-1.el7           @puppetlabs-pcl
puppetdb-termini.noarch     4.0.2-1.el7           @puppetlabs-pcl
puppetlabs-release-pcl.noarch 1.0.0-2.el7           @/puppetlabs-release-pcl-el-7.noarch
puppetserver.noarch         2.3.2-1.el7           @puppetlabs-pcl
[root@master smart-proxy]# /opt/smart-proxy/bin/smart-proxy
Errors detected on startup, see log for details. Exiting: cannot load such file -- puppet
```

It would be really great to see this start working someday :)
