Foreman - Bug #13669

PUTing any null id to /api/v2/hosts/:id results in incorrect error message

02/11/2016 10:20 AM - Walden Raines

Description

A null value in any of the *_id attributes of host results in an incorrect error message.

Here is the JSON I PUT:

```
{
    "realm_id": null
}
```

And here is the response

```
{
  "error": {
    "message": "Resource host not found by id '1'"
  }
}
```

If an *_id attribute is null then either it should be ignored or it should remove the association as applicable.
