Foreman - Bug #13670

SQL error when PUTing a numeric id to /api/v2/hosts/:id for any *_id attributes

02/11/2016 10:30 AM - Walden Raines

Status:	Resolved		
Priority:	Normal

Difficulty:		**Fixed in Releases:**	
Triaged:		**Found in Releases:**	
Bugzilla link:	1396551	**Red Hat JIRA:**	
Pull request:			

Description

JSON provided:

```
{
    "architecture_id": 1
}
```

Response:

```
{
  "error": {
    "message": "ERROR:  operator does not exist: character varying = integer\nLINE 1: ...architect
ures\".\"id\" = 1 OR \"architectures\".\"name\" = 1))  ORD...\n
                        ^\nHINT:  No operator matches the given name and argument type(s). You m
ight need to add explicit type casts.\n"
  }
}
```

Ultimately, one should be able to provide the exact same JSON received from a GET on /api/v2/hosts/:id back as a PUT without errors.

History
