Foreman - Bug #13705

facts with parents are not visible via search

02/15/2016 06:33 AM - Ohad Levy

Description

When viewing facts from subscription manager, which have parent child relationship, for example: dmi::<something>
when I initially click on the DMI, dmi does not get reflected as a parent in search.

I was expecting that the search filter updates as i select parent child facts similar to how other plugins(chef) and core does it.

(a simple search of name ~ dmi::* can provide all possible values as well.)

This is a limitation of ancestry, it does not define proper relation on parent objects so scoped search can't search based on that. Suggested searching with name ~ parent::* would probably work but it might have performance implications. I'm not sure it's that useful after #14313 is merged. Also if you're still interested, I suggest moving this to Foreman tracker as this is not Katello specific.

#5 - 07/08/2016 11:28 AM - Justin Sherrill

- Project changed from Katello to Foreman

- Category deleted (Hosts)

Moving to foreman based on marek's comment which i agree with. Will leave it up to ohad to close or leave open.
