

Foreman - Bug #13724

Invalid network devices on RHEL 5

02/16/2016 01:19 AM - Otavio Piske

Status: Closed	
Priority: Normal	
Assignee: Otavio Piske	
Category: Templates	
Target version: 1.10.2	
Difficulty:	Fixed in Releases:
Triaged:	Found in Releases:
Bugzilla link:	Red Hat JIRA:
Pull request: https://github.com/theforeman/community-templates/pull/238	
Description	
Hello,	
I noticed that the templates may create invalid network devices RHEL 5. Basically the device is named "eth0", with double quotes, instead of eth0. The root cause seem to be the double quotes on the double quotes on the device configuration created by community-templates/snippets/kickstart_networking_setup.erb.	
I believe this problem may happen on CentOS 5 as well, but I did not test on it. I seem to have fixed the problem by modifying the aforementioned file and I will submit a proposed patch through Github for your evaluation.
