Description

Hi,

support for puppet kick (puppetrun) e.g --class or --tags would be very nice. (for single and multihost puppetruns)

in my mind i have this picture:

a checkbox e.g "extra opts" and then a pop up to configure the options (cmd input or also checkboxes with input fields)

rgds f0

since puppetrun is mostly deprecated via puppetlabs, I would suggest to use the foreman remote execution plugin to achieve that instead.

The smart proxy supports a number of Puppet run providers, not just puppet kick command - most of which should be able to accept tags etc. This seems pretty valid to me.

#4 - 03/15/2016 05:44 AM - Ohad Levy

I do agree its a valid request, I do feel that the right way forward solving this is via the remote execution plugin vs in foreman itself.
if you still disagree - please change the status accordingly.
