Description

Cloned from https://bugzilla.redhat.com/show_bug.cgi?id=1306395
Description of problem:
While adding parameter to any host if the parameter value contain the multiple space , it's generating the faulty yaml and hence the corresponding faulty change are reflected to the puppet agent.

Version-Release number of selected component (if applicable):
6.1

How reproducible:
Every time

Steps to Reproduce:
While adding parameter (Host --> parameter --> add parameter) to any host if the parameter value contain the multiple lines with spaces ("\" shows up every 2nd entry in between parts of the line) , it's generating the faulty yaml add and hence the corresponding faulty change are reflected to the client config file.

```
extend   =    auth                       include            password-auth
          account    include                password-auth
```

Corresponding yaml generated

```
extend: ! "auth              include              password-auth\r\naccount
    \     include              password-auth"
```

extra '\' added.

Actual results:

Expected results:

A slash before a space is valid in YAML as far as I know, it shouldn't appear when loaded. The supplied YAML loads fine for me:

```
{"extend"=>"auth            include          password-auth\r\naccount         include          pas
sword-auth"}
```
