- Project changed from *Foreman Remote Execution* to *Foreman*

- Category set to *Compute resources - EC2*

#5 - 02/22/2016 05:53 AM - Dominic Cleal

- Subject changed from *When select the network to see the security groups for amazon ec2 foreman crash showing the following issue in the logs to Fact imports fail with: Validation failed: Fact name has already been taken*

- Description updated

I have no idea what the association between security groups/EC2 is and the log you posted, there is none. The log is from a Puppet/config management facts import and is nothing to do with the EC2 UI. If you have a bug with the UI then that needs filing separately.

I've updated this bug to be about the log file you posted (and fixed the formatting - please wrap logs in "pre" HTML tags).

@Dominic Cleal: We have tested a possible fix, the code of which is below. It's not elegant, but it is effective. Our facts uploads have started working on all our reporting agent platforms since then, including any new facts added.

Recommend this (or something like it) be added for 1.10.4, as this is presently a regression from 1.9's functionality, and affects some users of all current 1.10 versions. Some of us are deploying this along with Katello 2.4, so we're trying to maintain the released combination of Foreman 1.10 and Katello 2.4, and the inability to upload facts does cause some significant issues with Puppet.

Thanks in advance for your time and consideration in this!

/Mike

Please submit patches as pull requests via GitHub - more information at <http://theforeman.org/contribute.html> and <http://theforeman.org/handbook.html>, we can't merge them from a comment on a ticket. When a change is merged then we can evaluate which release it goes into.

Correction: I tried to submit, but it's just local to my repo. Trying to avoid issues with our firewalls by doing it as a copy/paste via the GitHub GUI; have to reconfigure git to work with our firewalls/proxy and not break my local config. Will re-submit properly when that's done.

Setting a target release to 1.10.4 as it was requested by user who tested it. It should be safe and easy to apply. The issue was present in Foreman prior 1.4 (at that point I stopped searching). If others think it's too risky, please feel free to change.
