Foreman - Feature #13824

Allow disassociation of VMs via Compute-Resource-Screen

Description

Currently it's only possible to disassociate a VM from the compute resource via

Hosts -> Check System -> Action: Disassociate

Intuitively I'd expect this function in the compute resources' screen, too:

Delete a compute-resource: Disassociates all associated VMs.

My use case is:
Installation of hypervisor + VMs, ship the created system to customer, want to get rid of fragments created by this action.

History

Maybe get also asked if the hosts should be deleted, too, upon deleting the underlying compute resource.
