

Foreman - Bug #13911

puppet cert is not revoked when host is deleted if ':unattended: false' is set

02/25/2016 05:23 PM - Matt Cahill

Pull request:	
Description	
<p>If :unattended: is set to true and a particular host is managed by foreman then when deleting the host from foreman the associated puppet certificate will be removed as well.</p> <p>When :unattended: is set to false there is no way to manage a host in the UI and as a result deleting a host from foreman never triggers foreman-proxy to remove the puppet cert.</p> <p>I think expected behaviour should be that when :unattended: is false management of puppetca proxy elements should only depend on the state of the 'Manage PuppetCA' UI setting.</p> <p>Foreman 1.10.2 ruby 1.9.3p484 (2013-11-22 revision 43786) [x86_64-linux] Ubuntu 14.04.4 LTS Puppet 3.8.6</p>
