

Foreman - Feature #1392

change root password back to system wide defaults

12/14/2011 06:16 AM - Steve Traylen

Status: Closed	
Priority: Normal

Category: Unattended installations	
Target version: 1.0	
Difficulty:	Fixed in Releases:
Triaged:	Found in Releases:
Bugzilla link:	Red Hat JIRA:
Pull request:	
Description	
Foreman 0.4.0	
If we go to a host and try and edit or delete the root password then the yaml seems to end up with something bizarre in it.	
root_pw: \$1\$foreman\$mScJrlfRylrlhmRGTArV0	
We did not add a \$foreman in our password string, in the case below the password was entered as 'abc'.	
Attached screenshot shows where we are changing the root password for the kickstart file.	
Here is the log entry:	
<pre>Processing HostsController#update (for 137.138.35.29 at 2011-12-14 12:08:50) [PUT] Parameters: {"commit"=>"Submit", "action"=>"update", "_method"=>"put", "authenticity_token"=>"id vGaySYtzsszlUcNISGOxHV8Y7tCxrDszSkiGqKjm8=", "id"=>"lxfssm4403.cern.ch", "controller"=>"hosts", "host"=>{"comment"=>"", "architecture_id"=>"1", "subnet_id"=>"1", "managed"=>"1", "puppetproxy_id"=>"", "name"=>"lxfssm4403", "host_parameters_attributes"=>{"0"=>{"name"=>"nova_node_availability_zone", "nested"=>"", "id"=>"154", "value"=>"batch", "_destroy"=>""}}, "sp_mac"=>"", "puppetmaster_name"=> "punch.cern.ch", "sp_name"=>"", "mac"=>"00:e0:ed:0e:60:ae", "domain_id"=>"1", "enabled"=>"1", "root_pass"=>"[FILTE RED]", "medium_id"=>"6", "hostgroup_id"=>"3", "is_owned_by"=>"20-Users", "ptable_id"=>"9", "sp_subnet_id "=>"", "ip"=>"10.32.22.10", "environment_id"=>"6", "model_id"=>"4", "disk"=>"", "sp_ip"=>"", "puppetclass_ids"=>[""], "operat ingsystem_id"=>"9"}} Redirected to https://punch.cern.ch/hosts/lxfssm4403.cern.ch Completed in 35ms (DB: 5) 302 Found [https://punch.cern.ch/hosts/lxfssm4403.cern.ch]</pre>	
And finally a related question. Are we meant to adding the root password or the crypt of the password in this box.

fixes #1392 - change root password back to system wide defaults

History

That looks like a valid salted password to me - certainly my test Managed Hosts have that salt and their password works fine. Can you lon in to the host using the 'abc' password?

You should be entering the plaintext in the Host Edit page - Foreman encrypts it immediately and stores the hash in the db.

#2 - 12/15/2011 04:58 AM - Steve Traylen

Hi Greg,

Indeed you are quite correct, login to the system is quite possible, 15 years unix and I've learnt something new.

There is still possibly one remaining item. If the password is set as a blank on the host page then the old password survives. There is good logic to that for sure since it stops people setting blank passwords.

However there is already a catch all hash within the form settings itself. Currently it seems to be impossible to set a node back to that global value.

Steve.

This is highly informatics, snappy and semitransparent. I cogitate that Everything has been described in systematised variety so that order could get extremum message and take many things

Nutraslim

Its not the specialistic that pressman moldiness be completely unsegregated with communicator's views around muhammedan. So this is what happened with me, anyways its a hellene try, I retell it. Thanks
