Description	
<p>For example, IE<=10 and older versions of FF/Chrome. Supporting old versions requires extra code in our front end (both js and css) and limits our possibility of using newer technology. When updating, we can also update jQuery to 2.x. This should be noted in release notes.</p>

Fixes #13936 - Drop support for legacy browsers

This patch removes various workarounds needed to get legacy browsers to work. Mostly stuff needed for IE<10, but also some other vendor prefixes that are no longer needed.
