| <b>Pull request:</b>  |                               |                                 |
| <b>Description</b>  |                               |                                 |
| when working with snapshots in openstack, usuelly its very time consuming to boot from volume spacyly with large volumes, one of the most affective way to work with external storage and volumes is to use "boot from volume snapshot" |                               |                                 |
