Bugzilla link:		**Red Hat JIRA:**		
Pull request:	https://github.com/theforeman/foreman/pull/3556			

Description

If I add a user to my foreman, the new user doesn't get "Puppet error state" mails although the option is enabled.

More information:

- I installed an earlier version from source (I think it was 1.8.?) using bundler and updated from time to time to a newer version using bundler. The currently used version is Foreman version 1.10.2.
- This problem was also present in 1.9.3.
- A user that I added in an earlier version is getting the subscribed mails, even if I disable and re-enable the "Puppet error state" mail subscription in the user's settings
- I checked the foreman database table user_mail_notifications and found the new user is listed in there. However no mail is sent.
- I enabled debug loglevel and searched the logs, but no suspicious errors/warnings.

Fixes #14013 - add a setting for default owner of new hosts

History

#1 - 03/02/2016 10:17 AM - Dominic Cleal

- Status changed from New to Feedback

The user (or a group that they are in) must be the registered owner of a host, check under the last tab of the host edit page.

Ok, if I change the owner the mails are sent. Thanks !

I have same questions:

- Is there a way to define a default for new hosts ?
- How is the owner of a host determined initially (I did not create hosts manually, they were all added automatically) ?
- Is there a intended way of changing the owner of all hosts ?

No, I don't think you can define a default in any way. If a user adds a host through the web UI/API then the owner will be set to them, but for hosts picked up through Puppet etc, it'll probably be unset. If a user edits the host later it might be set to them.

You may want to watch ticket [#9470](#) which will add a way to receive all Puppet error reports.

- Is there a intended way of changing the owner of all hosts ?

Foreman 1.11 adds a change owner option to the bulk actions menu on the host list (after ticking the boxes) via ticket [#1584](#).

I think the possibility to set a default is sensible, possibly an option settable in the Foreman settings.

Apart from that, my issue is solved :)
