Pull request:	https://github.com/theforeman/foreman-installer/pull/168		

Description

In 1.11.0-RC1 and nightly, on both Debian and EL7 I'm seeing no URL for the Foreman proxy in the post-install hook from foreman-installer:

```
# foreman-installer
Installing              Done                                               [100%] [................
.................................]
  Success!
  * Foreman is running at https://foremandeb.example.com
      Initial credentials are admin / redacted
  * Foreman Proxy is running at   * Puppetmaster is running at port 8140
  The full log is at /var/log/foreman-installer/foreman.log
```

This is due to https://github.com/theforeman/puppet-foreman_proxy/commit/c1fa75f0e2c15c0c4044ce5cbd524427536e339f which no longer populates the foreman_proxy::registered_proxy_url parameter and instead loads it from the name and port at runtime.
