Pull request:			

Description

Currently you can view a list of certificates on the Puppet CA via the Foreman webUI if you have the smart-proxy installed however you can only filter by state of the certificate (valid, pending, expired). It would be useful if that filter was expanded include a free text search based on certificate name and possibly even something for expires.

- Project changed from Smart Proxy to Foreman

- Category changed from Puppet to PuppetCA

- Status changed from New to Resolved

Foreman 1.11 has a free text search on the certificate list now, you can access it via the smart proxies list, clicking a proxy and using the Puppet CA tab. Please try out the release candidates if you can, see https://groups.google.com/forum/#!topic/foreman-announce/_P1ajFikDAs for details.
