I'm afraid that might break a lot of people existing templates, maybe we could add another family for esx?

I concur, ESX kickstart have specific options. For example, I don't know if its a good thing to install puppet agent on ESX. Can you provide a valid template for installing ESX?

#3 - 07/04/2012 12:34 PM - Corey Osman

I documented how to do the kickstart here

http://theforeman.org/projects/foreman/wiki/VMware_ESXi

Also, I don't want to install puppet on ESX as its now allowed. I only want to install ESX the OS.
