| Target version: | |
| Difficulty: | Fixed in Releases: |
| Triaged: | Found in Releases: |
| Bugzilla link: 1460907 | Red Hat JIRA: |
| Pull request: | |
| Description | |
| How to reproduce: | |
| <ol style="list-style-type: none">1. Create a user2. Create a role with following permissions: view, create, add, remove filters; view, edit roles; view, assign organizations; view, assign locations;3. Assign the new role to the new user4. login as a user5. Go to Administer -> roles6. Press 'Filters' button for any role except for the new one. | |
| Expected: list of filters for that role | |
| Actual: empty list | |
| While investigating, I have found that the problem starts in app/services/authorizer.rb:25 The query produced by user.filters contains a filter on role_id which is not needed there. | |
