#### Description

Cloned from [https://bugzilla.redhat.com/show\\_bug.cgi?id=1195180](https://bugzilla.redhat.com/show_bug.cgi?id=1195180)

Description of problem:

The naming of the full hostgroup is inconsistent in both WebUI and API. In total is has 4 different names for the same value:

API

hosts -> hostgroup\_name

hostgroups -> title

WebUI search has:

Hosts -> hostgroup\_fullname or hostgroup\_title field

Host Groups -> label field

API:

```
1. curl -K /opt/hoici/etc/sat6/curl-hoici.conf "-HContent-Type: application/json" "-d{\"per_page\":9999}" -XGET
https://localhost/api/v2/hostgroups | jq '.results[] | .title' | grep Backup
"crash/Backup"
"crash/Backup/BackupTest"
```

```
1. curl -K /opt/hoici/etc/sat6/curl-hoici.conf "-HContent-Type: application/json" "-d{\"per_page\":9999}" -XGET
https://localhost/api/v2/hosts | jq '.results[].hostgroup_name' | grep Backup
"crash/Backup/BackupTest"
```

WebUI search:

Host Groups page:

"label ~ Backup"

Hosts page:

"hostgroup\_fullname ~ Backup"

or

"hostgroup\_title ~ Backup"

Version-Release number of selected component (if applicable):

How reproducible:

Steps to Reproduce:

1. Create nested hostgroups
2. Add host to hostgroup
3. Query the full hostgroup name/label

Actual results:

Different field names has to be used

Expected results:

Consistent field name. Preferably label as this is also consistent with the Katello part.
