Description	
Each test run uses the simplecov gem to generate coverage reports. This slows down tests and is not used AFAICT by anyone. This is especially significant for CI as the test suite is executed multiple times on slow workers. Remove the gem and coverage reporting.

Fixes #14191 - remove simplecov test coverage reporting

Why remove it entirely? If removed then it's hard to enable if you *do* want to know about coverage.

Consider disabling it by default with an opt-in like [#11208](#) describes, or disable it only during certain types of tests.
