Foreman - Bug #142

RRD graph URL should not get forced to HTTP

12/20/2009 02:09 PM - Frank Sweetser

Description

The URLs generated for the RRD graphs should use whatever protocol (HTTP/HTTPS) the page they were generated from is using, rather than getting forced to HTTP. This patch does that by just leaving the protocol portion of the URL off entirely.

this patch will not work when the rrd's are stored on another host than the host running foreman.

I'm not sure it makes so much sense to keep on supporting the rrd graphs, as it is so much easier for us just to plot them our self.

do you consider the rrd graphs as something that requires SSL? - as I assume you must have a vhost for supporting kickstart anyway...

That's true, I didn't consider that configuration. I guess you could either put the host.pm_fqdn value back in, or remove the leading / and let the user set the hostname (and, if required, protocol) as part of :rrd_report_url.

That would certainly make things simpler.

> do you consider the rrd graphs as something that requires SSL? - as I assume you must have a vhost for supporting kickstart anyway...

In my setup, yeah, I'd prefer to keep them SSL. I basically have two vhosts - one on 80 for things that can't be secured (kickstart and the like), and another one on 443 that apache is setup to require authentication for.

now that there are host report graphs, can I reject this ?

#4 - 01/17/2010 02:44 AM - Frank Sweetser

Fine by me - moving the graphs into foreman itself completely solves the issue for me. Thanks!
