

Foreman - Bug #14200

External user groups auth source dropdown menu doesn't open

03/15/2016 05:23 AM - Dominic Cleal

Status: Closed	
Priority: Normal	
Assignee: Dominic Cleal	
Category: Web Interface	
Target version: 1.11.1	
Difficulty:	Fixed in Releases:
Triaged:	Found in Releases:
Bugzilla link: 1319158	Red Hat JIRA:
Pull request: https://github.com/theforeman/foreman/pull/3325	
Description	
When editing a user group, the auth source dropdown menu when adding an external user group doesn't open.	
<ol style="list-style-type: none">1. Edit a user group2. Go to the "External groups" tab3. Click "Add external user group"4. Try to click the "Auth source" dropdown menu	
Similar to #14041 I think, where select2 is being initialised in the form template when it isn't visible and before it's copied to the new form, and it should only be initialised after the new set of form fields are added.

Revision 10c98a9a - 03/16/2016 05:01 AM - Dominic Cleal

fixes #14200 - exclude form templates from select2 initialisation

Form templates shouldn't be initialised with select2, as the elements are copied through `add_child_node`, e.g. when adding a new external user group inside the user group form. `add_child_node` calls select2 after copying the form instead.

I think [#10911](#) fixed this originally, then [#11374](#) broke it (only keeping it working in smart variables) as the destroy was removed. I hope this fix is more persistent as it doesn't depend on destroying them when creating the new child form.
