

Foreman - Bug #14248

Unable to control where users can build hosts

03/17/2016 07:38 AM - Tomer Brisker

Status: Duplicate	
Priority: Urgent	
Assignee: Tomer Brisker	
Category:	
Target version:	
Difficulty:	Fixed in Releases:
Triaged:	Found in Releases:
Bugzilla link: 1293716	Red Hat JIRA:
Pull request:	
Description	
Cloned from https://bugzilla.redhat.com/show_bug.cgi?id=1293716	
Description of problem: When a user has the 'create_hosts' permission then there are no controls to limit what Location, Host Group, Lifecycle Environment, Content View that the user can create the host in.	
Version-Release number of selected component (if applicable): 6.1.5	
How reproducible: Create a user, assign to a role. Give the following roles access_dashboard assign_organizations, view_organizations assign_locations, view_locations edit_products, view_products name = P_GIRAFFE promote_or_remove_content_views, view_content_views, publish_content_views name = CCV_CSL3.1_GIRAFFE or name = CV_GIRAFFE promote_or_remove_content_views_to_environments, view_lifecycle_environments name = ENG create_hosts, view_hosts hostgroup_fullname = HG_Capsule	
Notice in the New Host as this user you can view ALL Host Groups, ALL Lifecycle Environments, ALL Content View's etc and initiate the build of a host.	
Actual results: Host is created by in host groups, lifecycle environments we have tried to limit.	
Expected results: Host creation to only show resources that the user has access too.
