Foreman - Bug #1439

Foreman can only use Puppetmaster's via smartproxy that expose "Puppet CA"

Description

Puppetmaster's are only usable from the host edit page if they have the "Puppet CA" feature which breaks in the face of a single puppetmaster dedicated to certs:

Sorry this took so long to patch, Ohadlevy, but as you know I'm an idiot!

mind sending a git patch?

#2 - 01/29/2012 08:55 AM - Ohad Levy

bump!

and, maybe we should display both? (CA + Puppet) ?

#3 - 02/05/2012 12:33 PM - Ashley Penney

Sorry, I didn't see the git patch thing. I'll take care of this on Monday. Actually your update made me think - it would be nice to have a separate drop-down for CA. In my environment I have separated out the Puppet and CA bit so being able to select both and then deal with that in templates would be awesome.

As it stands they are all pointing to one CA server right now but it makes sense to keep that information in Foreman rather than just hardcoded into a

template within puppet.

#4 - 02/09/2012 06:46 AM - Ohad Levy

sounds good
btw: today is Thu :)

#5 - 02/23/2012 03:05 PM - Ashley Penney

Two weeks late but: https://github.com/theforeman/foreman/pull/28
