Description

What is the blocker to add code logic to remove (dhcp.destroy) built hosts from dhcpd.leases file in "Build complete" call? I am looking forward to have to deal with smaller dhcpd.leases. So, the API calls for new hosts addition can be quicker.

Assumptions:

1. Re-build anyways adds DHCP entries for hosts which are not present in DHCP.
2. Re-imaging (Or DiscoveryOS boot) of such hosts don't proceed, if they're pxe booted. Since, tftp file is already edited to boot local after first install.
