Triaged:	Found in Releases:
Bugzilla link:	Red Hat JIRA:
Pull request: https://github.com/foreman/foreman/pull/3383	
Description	
<p>The rails-observers gem can be removed with a small amount of refactoring. It was added with Rails 4 support in #7230 as it was removed from Rails core.</p> <p>It's used for the HostObserver which contains one after_validation method to expire or generate build tokens when the build state changes, but this could be refactored away from observers.</p> <p>Dropping the dependency will provide a very marginal installation and speed improvement.</p>

fixes #14434 - refactor tokens into concern from observer

rails-observers is still required via audited, but this removes the usage in Foreman itself and unifies token-related code.

History

#1 - 04/01/2016 04:15 AM - Dominic Cleal

- Subject changed from Remove rails-observers dependency to Refactor host token support into concern

It isn't possible to remove the dependency entirely as the audited gem still depends on it, I missed that. It's possible to remove the usage from Foreman core though and refactor the token support into a single concern.
