Pull request:	
Description	
Hello,	
I've recently set up foreman and while playing with it, I added LDAP authentication and changed the admin username to my LDAP username, after this reports and builds fail with the following error:	
Failed to set Build for myserver.mydomain.local due to:undefined method `allowed_to?' for nil:NilClass	
or	
Failed to process report for myserver.mydomain.local due to:undefined method `allowed_to?' for nil:NilClass	
Maybe it would be best to disable this 'feature' for the moment, or add support for the change.	
Foreman version: latest git revision	
Thanks, Herk.
