#### Description

Cloned from [https://bugzilla.redhat.com/show\\_bug.cgi?id=1308931](https://bugzilla.redhat.com/show_bug.cgi?id=1308931)

Description of problem:

domain name value in YAML refers to domain Description instead of DNS domain

How reproducible:

Open the Satellite 6.1.6 web interface

- Go to Infrastructure --> Domains

- Click on a domain.

- A new screen opens with the 'Domain' tab opened. Please note that this tab contains 3 fields: 'DNS domain', 'Description' and 'DNS Capsule'.

- Now go to Hosts --> All hosts

- Select a managed host.

- Click on the YAML button.

- The YAML file includes a 'domainname' variable. The value of this variable is set to the 'Description' field value just mentioned.

However, would expect this variable to be filled with the 'DNS domain' field value.

Version-Release number of selected component (if applicable):

6.1.6

Steps to Reproduce:

- 1.
- 2.
- 3.

Actual results:

Expected results:
