Pull request:	
Description	
When you are trying to override an hash value in Host ==> Puppet class parameter it shows [object Object] instead of the parameter value	

History

#1 - 04/13/2016 09:54 AM - Dominic Cleal

- Subject changed from *Override hash value on host* to *Override hash value on host shows "[object Object]" instead of value*
- Category set to *Parameters*

Could you show a screenshot? Is this any hash parameter, and what value's already in the hash (is it JSON or YAML)? Perhaps using the YAML/JSON modes specifically works around the problem.

Also, which version of Foreman is this?

#2 - 04/13/2016 10:21 AM - Loic FONTAINE

This bug issued when I updated to Foreman 1.11 : this value already existed in Foreman 1.10. But now when I create a new hash value it works perfectly :)

#3 - 04/13/2016 10:23 AM - Dominic Cleal

- translation missing: *en.field_release* set to 141

Tentatively setting to 1.11.x as the error might be from the JS override.

#4 - 04/18/2016 10:32 AM - Dominic Cleal

- translation missing: *en.field_release* changed from 141 to 155

#5 - 05/18/2016 05:56 AM - Dominic Cleal

- translation missing: *en.field_release* changed from 155 to 159

#6 - 06/21/2016 03:48 AM - Dominic Cleal

- Status changed from *New* to *Resolved*
- translation missing: *en.field_release* deleted (159)

This didn't get fixed in 1.11.x, and since it seems to work for you now, I'll close it. If it recurs then we can re-open. Thanks for the report!
