

## Foreman - Bug #1467

### invalid entry added to autosign.conf

01/23/2012 01:57 PM - Adrian Bridgett

<b>Pull request:</b>	
<b>Description</b>	
When building the server "foreman-basic.example.com", this entry was added to /etc/puppet/autosign.conf. Using Foreman v0.4.1	
["[]foreman-basic.example.com\n"]	
(in case that gets mangled, that's open-square-bracket, double-quote, open-square-bracket, close-square-bracket, foreman-basic.example.com, backslash, n, double-quote, close-square-bracket.	
Not sure where to start looking TBH (I have foreman-proxy installed as well, I took a quick look through the code but my ruby skills are too weak at the moment).	

#### History

how did you enter those ? the only way I could see if happening if someone enter that manually at at More > Proxies > Autosign and entered that text there.

if you have the logs from foreman that reproduce that, that would be great.

##### #2 - 01/24/2012 09:56 AM - Adrian Bridgett

I certainly didn't do that and don't remember altering any code that might do so. I was altering some other parts (see <http://theforeman.org/issues/1461>), maybe that's why.

more->smart->proxies->autosign says:

```
smart_proxy_autosign_url failed to generate from {:smart_proxy_id=>#<SmartProxy id: 2, name: "Smart Proxy", url: "http://192.168.122.1:18443&quot;, created_at: "2012-01-19 17:38:04", updated_at: "2012-01-19 17:48:58">, :action=>"destroy", :controller=>"SmartProxies::Autosign", :id=>"[]foreman-basic.example.com\n"}", :auth_ation=>:destroy}, expected: {:action=>"destroy", :controller=>"SmartProxies::Autosign"}, diff: {:smart_proxy_id=>#<SmartProxy id: 2, name: "Smart Proxy", url: "http://192.168.122.1:18443&quot;, created_at: "2012-01-19 17:38:04", updated_at: "2012-01-19 17:48:58">, :id=>"[]foreman-basic.example\n"}, :auth_ation=>:destroy}
```

I wonder if there's something up with my ruby install (I have both 1.8 and 1.9 installed - it's not fabulously clean).

##### #3 - 01/24/2012 12:28 PM - Adrian Bridgett

In case it helps, several rebuilds later autosign.conf now looks like this:

```
["["[]foreman-basic.example.com\n\n\n"]foreman-basic.example.com\n\n"]foreman-basic.example.com\n"]
```

- Status changed from New to Need more information

do you know if you are using a smart proxy or not? could you paste the logs of when you add a new host? for both the proxy and foreman?

thanks!

##### #5 - 02/06/2012 09:06 AM - Adrian Bridgett

Sorry the delay - I thought I'd at least answered your first question. Yes we were using a smart proxy.

I've done a new install on a new server and I'm not seeing this behaviour any more.

autosign.conf is a very simple file that simply lists the objects which will be automatically signed. Good post to share. All your posts are helpful.

My computer shows an error in autosign.conf. I have no idea what this error is. Is it possible that this could be due to a virus?
