Installer - Bug #14685

Ability to set SSL Ciphers, Order & Compression during install

04/18/2016 11:26 AM - Duncan Innes

Description

User needs the ability to set:

SSLCipherSuite
SSLHonorCipherOrder
SSLCompression

values to be used in:

/etc/httpd/conf.d/25-puppet.conf
/etc/httpd/conf.d/ssl.conf

The requirement is due to security settings that restrict the Ciphers and compression beyond the default values used in a Katello install. Manual adjustment can be made to these files while the services are offline, but these foreman-installer would overwrite these custom settings during the next upgrade.

Is it possible to have these values set via foreman-installer command line flags?

- Status changed from New to Resolved

We ship better defaults now. The ciphers and ssl protocols are exposed as parameters except for puppet + passenger since that's deprecated in favor of puppetserver. We do allow overriding them with hiera though.
